Daniela Fermin Rennola

Product Designer & Researcher turning insight into impact.

Turning complex enterprise challenges into products that ship — from subscription platforms to AI tools, design systems to developer handoffs.

11→4 onboarding steps

OMEN Gaming as a Service

CONTEXT

Designed the end-to-end user experience for HP OMEN's Gaming-as-a-Service subscription platform. This initiative redefined how gamers access premium hardware and software through a unified, always-on service model.

THE CHALLENGE

Create a seamless subscription experience that bridges hardware ownership and gaming-as-a-service, making premium gaming accessible while driving long-term customer retention.

THE MOVE

Unified hardware pairing and plan selection into a single flow — cutting onboarding from 11 screens to 4 without losing a single legal or compliance gate.

OUTCOMES

- Complete user flows for subscription onboarding, hardware provisioning, and service management
- Aligned cross-functional teams across HP Business Units on a unified service model
- Scalable UX patterns adopted across OMEN's 2025 product lineup

40+ components shipped

Next Generation PC Experience

CONTEXT

Led the UX design and developer handoff for HP's next generation PC product line. Established the design language and component specifications for engineering teams.

THE CHALLENGE

Create a comprehensive design-to-engineering handoff that preserves design intent across a distributed team building HP's next-gen PC experience.

THE MOVE

Built a living design system with edge-cases-as-default documentation — adopted across the entire PC product line.

OUTCOMES

- 40+ UI components documented with full interaction states and edge cases
- Design system adopted by engineering teams across multiple product lines
- Reduced design-to-development cycles significantly

-40% completion steps

E-Sign Redesign Exploration

CONTEXT

Led Exploration B of the e-signature product redesign, a critical enterprise tool used by HP customers for legally binding digital transactions.

THE CHALLENGE

Balance the needs of enterprise IT administrators, document senders, and signers in a single coherent experience while maintaining compliance requirements.

THE MOVE

Progressive disclosure replaced the original 12-step linear process. Key actions surface contextually to reduce cognitive load.

OUTCOMES

- Redesigned signing flow reducing completion steps by 40%
- Unified experience serving three distinct user groups
- Maintained enterprise-grade compliance throughout

-30% QA feedback loops

Create Pilot — Developer Handoff

3.2

CONTEXT

Produced detailed design handoffs for version 3.2 of Create Pilot, HP's creative productivity platform. Translated complex interaction patterns into actionable specifications.

THE CHALLENGE

Creating handoff documentation thorough enough to eliminate ambiguity for developers while remaining adaptable to last-minute design decisions.

THE MOVE

Built a reusable handoff template with edge-cases-as-default — adopted by the broader HP design team.

OUTCOMES

- Documented 40+ UI components with full interaction states
- Introduced structured handoff template adopted by broader HP design team
- Reduced QA feedback loops by 30%

6→1 onboarding paths

AI Learning Journey

CONTEXT

Designed an adaptive AI learning platform that personalizes training paths for HP's design organization. Role-based personalization ensures each designer gets relevant modules.

THE CHALLENGE

Create a learning experience that adapts to different design roles while maintaining engagement and measurable skill progression.

THE MOVE

Real-time path generation — as users answer questions, their personalized plan builds live below, creating anticipation before they finish.

OUTCOMES

- Personalized learning paths for 4 distinct design roles
- Real-time adaptive path generation during onboarding
- Curated AI tool recommendations (Claude, ChatGPT, Figma AI)

Shipped on Vercel

Buddy Picker

CONTEXT

Designed and built an internal AI tool matching engine — a 3-question flow that surfaces the right AI tool for any design task in under 10 seconds.

THE CHALLENGE

HP's design team had access to multiple AI tools but no way to know which one to use for a given task.

THE MOVE

3-question matching engine — task type, output format, time available — surfaces the right AI tool instantly.

OUTCOMES

- Shipped as a real React app on Vercel, used daily across the team
- 3-question flow matching designers to the right AI tool
- Proof that designers building internal tools is a multiplier

LET'S CONNECT

Have a project in mind?

Based in Barcelona — open to remote and relocation.

Always open to discussing new opportunities,
collaborations, or just talking design.
